Visualising small risks

Imagine that this diagram shows the whole population (about 50 million)
Work out how many people are represented by each big square and each tiny square.
Under each cause of death, shade in the area representing the number of deaths shown.

Home accident 3892	Road accident 2697	Poison 913	Murder 643	Work accident 350	Force of nature 86	Terrorism 51
